supplied below. The first independent claim is amended to show that the material of the attachment system is transparent plastic and the contact adhesive is also selected to be transparent. These features are not in the claims of the competing patents cited. Transparency permits the user to show the pennant without the attachment means covering any of it. Also, the masts that this system can be used to attach pennants to include ropes and cables, not just antenna masts. This feature was not in the competing claims.

There are two method claims now, one for a single strip attachment, one for multiple-strip attachment.
